

SIXPRO® ORTHOPEDIC

ANTIFRICCIÓN 100% NATURAL

English

SPECIFIC ADVICE WITH SIXPRO®ORTHOPEDIC FOR PEOPLE WITH REDUCED MOBILITY OR PROSTHESIS

The application must be daily and the product should be applied twice a day. One application in the morning and another one at night. This routine will be enough to prepare the skin. It should not be massaged, simply applied to the risk zone. If the area is irritated, apply the product on a thin gauze then lay the gauze on the skin and leave it for a couple of hours until the next application. **It is really important to clean the affected area properly before applying the product again with physiological saline or non-irritating neutral pH soap.**

SIXPRO® ORTHOPEDIC is a natural cosmetic treatment perfect to minimize and prevent the risk of friction and maceration sores in people with reduced mobility or bedridden of any age. Perfect for use in people who require diapers as a result of functional diversity or some type of incontinence. Regarding pressure sores or pressure wounds, it is necessary the help of a specialized cushion that distributes weight in risk areas.

It is extremely important that in areas where sores or bedsores usually appear, (depending on the position of each patient) the skin acquires elasticity and the optimal

resistance to avoid cracking and wounds.

The extra virgin olive oil will provide a significant amount of vitamins providing elasticity and lubrication to the skin, the **virgin and fresh** beeswax will waterproof the area moisturizing it and providing numerous benefits such as anti-inflammatory, antibacterial, and antiallergic properties among others.

As a recommendation it's important to let the skin breathe, not covering the risk areas excessively, using fabrics like cotton or linen.
